

# Work with the Experts in Biophysics

## Project Manager Kinetics (m/f/d)

🎓 PhD-level degree

📍 Regensburg

🕒 full-time

📅 2021-07

### What to expect and who we are

2bind is a dynamic and aspiring contract research organization in the field of biophysical analytics. Our clients and partners mainly work in drug discovery, protein biochemistry, aptamer generation, and antibody development. Our mission is to support and help our clients and partners with innovative biophysical services. We are the first service provider in the market that is certified for the application of Creoptix' Grating Coupled Interferometry (GCI) kinetic interaction analysis, guaranteeing highest scientific standards. We are located in Regensburg, the center of the emerging South German "Bioregio", a cluster of high-tech, biotech, and life science industry players.

2bind's main areas of expertise are biophysics in early drug discovery and protein analytics. 2bind applies numerous specialized kinetic interaction assays using GCI and SPR. Additionally, 2bind utilizes the technologies MST, Dianthus, nanoDSF, DLS, and ITC for studying molecular interactions and proteins in terms of affinity, stability, thermodynamics, and stoichiometry.

As Project Manager Kinetics (m/f/d) you are responsible for coordinating client projects dealing with the characterization of molecular interactions using different kinetic methods such as BLI, GCI, or switch sense. Hit identification, hit validation, and hit characterization projects in early drug discovery or antibody characterization are in focus of your work. Furthermore, you will take part in the development of novel assay formats for studying molecular interactions and in the integration of novel biophysical technologies into 2bind's portfolio.

You will handle the following tasks in an independent and self-organized manner:

- Lead acquisition in relevant client segments (digitally and if possible in person)
- Client communication for technical and scientific project planning
- Project budgeting and drafting of quotations
- Project-related technical supervision of lab personnel
- Technical and scientific data analysis and reporting
- Post-project consulting and support of clients

### Who you are

- You have successfully completed your PhD in biophysics, biochemistry, biotechnology, or biology with main thesis parts related to protein analytics and interaction measurement.
- You have proven your scientific skills in an excellent PhD thesis project and have strong expertise in SPR, GCI, BLI, SwitchSense, MST, or other methods to study molecular interactions.
- You have a very good knowledge of German and English, both spoken and written. You can show this from scientific publications and/or oral presentations.
- You are skilled in managing scientific projects including customer communication, project planning, supervising lab personnel, project controlling, data analysis, and reporting.
- You are familiar with scientific data analysis, state-of-the-art office IT-infrastructure and digital working. Familiarity with a VBA, Python, or JavaScript is a clear bonus.
- You strive to bring your best into a highly dynamic team. Your coworkers experience you as particularly reliable, clear in communication, well organized, friendly and loyal.
- Working in a high-speed, customer, and quality-oriented environment comes natural to you.
- Your proven interest in IT systems, marketing & sales, or quality control is beneficial.
- Most importantly, you want to have fun in a dynamic group of people with an open mindset.

### Join us

We are looking forward to receiving your complete application documents, including your most recent CV, a compelling cover letter, relevant certificates and your salary expectation.

Please send your application as a single PDF document to
