

# Work with the Experts in Biophysics

## Project Manager Biophysics (m/f/d)

🎓 PhD-level degree

📍 Regensburg

🕒 full-time

📅 2022-01

### What to expect and who we are

2bind is a well-established contract research organization in the field of biophysical analytics. Our clients and partners come from pharma, biotech, and academia. Our mission is to support and help our clients with innovative biophysical services. 2bind's main areas of expertise are early drug discovery, protein bioanalytics, and antibody characterization. 2bind utilizes MST, Dianthus, GCI, BLI, and ITC for studying molecular interactions in terms of affinity, kinetics, thermodynamics, and stoichiometry. Additionally, nanoDSF and DLS methods are applied for protein bioanalytics and pre-formulation development. Highest scientific and technical standards are guaranteed: We are the first service provider in the market that is certified for the application of MST, nanoDSF, and GCI. 2bind is based in Regensburg, the center of the emerging South German "Bioregio", a cluster of high-tech, biotech, and life science industry players.

As Project Manager Biophysics (m/f/d) you will fill a Senior Scientist role and will be responsible for coordinating and managing client projects dealing with early-stage drug discovery (hit identification, validation, and characterization) or antibody development, with a strong focus on our portfolio of MST, Dianthus, and ITC assays and methods. Furthermore, you may support projects dealing with our GCI, nanoDSF, and DLS technologies. You also take part in the development of novel assay formats for studying molecular interactions and in the integration of novel biophysical technologies into 2bind's portfolio.

You will handle the following tasks in an independent and self-organized manner:

- Lead acquisition in relevant client segments (digitally and, if possible, in person)
- Client communication for technical and scientific project planning
- Project budgeting and drafting of quotations
- Project-related technical supervision of lab personnel
- Technical and scientific data analysis and reporting
- Post-project consulting and support of clients

### Who you are

- You have shown your scientific skills in an excellent PhD project in biophysics, biochemistry, biotechnology, or biology with main thesis parts related to protein analytics and interaction measurement (MST, ITC, Dianthus, GCI, nanoDSF, etc.).
- You have a very good knowledge of German and English, both spoken and written. You can show this from scientific publications and/or oral presentations.
- You are skilled in managing scientific projects including customer communication, project planning, supervising lab personnel, project controlling, data analysis, and reporting.
- You are familiar with scientific data analysis, state-of-the-art office IT-infrastructure and digital working. Familiarity with VBA, Python, or JavaScript is a clear bonus.
- You strive to bring your best into a dynamic team. Your coworkers experience you as particularly reliable, clear in communication, well organized, friendly and loyal.
- Working in a high-speed, customer, and quality-oriented environment comes natural to you.
- Your proven interest in IT systems, marketing & sales, or quality control is beneficial.
- Most importantly, you want to have fun in a dynamic group of people with an open mindset.

### Join us

We are looking forward to receiving your complete application documents, including your most recent CV, a compelling cover letter, relevant certificates and your salary expectation.

Please send your application as a single PDF document to
